

How do I embed a video into the welcome screen, sidebar or information marker

Admin/ Information Markers can be used to display a video when the marker is clicked on the map.

Step-by-step guide

Login to the Admin site

Drag an [Info Marker](#) onto the map or edit an existing [Info Marker](#)

Click to Enlarge	Steps
	<p>Select the <i>Insert Video</i> option from the editor toolbar (see below)</p>
	<p>Paste the embed code for your video into the Insert Video form as shown; then press Insert.</p>

The embedded video is now shown when users click on the Admin/ Information Marker

The same process can be applied within a Sidebar tab

Use the video **embed code** not the video URL. Iframe width should be set to max 350px for optimal display.
